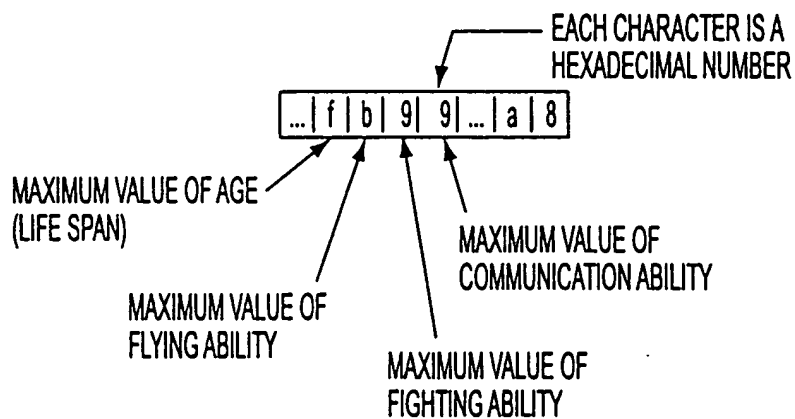

FIG. 17

The diagram illustrates the system architecture and data flow. At the top, a **STORAGE MEDIUM SUCH AS CD-ROM** (100) is shown. An arrow points from it to the **GAME MACHINE MAIN BODY** (20). The main body contains a **REVERSE REFERENCE OF THE GENE INFORMATION TABLE**. This table is shown as follows:

IDENTIFICATION NUMBER	GENE INFORMATION
000001	ABCDEFGHIJ...
000002	CBCSSSGHII...
000003	XAKDEPPPIJ...
.....

Below the main body, two **PORTABLE GAME TERMINAL**s are shown: **PORTABLE GAME TERMINAL A** (1A) and **PORTABLE GAME TERMINAL B** (1B). Both terminals have an **IDENTIFICATION NUMBER** (A and B respectively) and a **GENE INFORMATION** field. The flow is as follows:

- PORTABLE GAME TERMINAL A** (1A) sends its **IDENTIFICATION NUMBER A** to the **GAME MACHINE MAIN BODY** (20).
- The main body performs a **REVERSE REFERENCE OF THE GENE INFORMATION TABLE** to find **GENE INFORMATION A**.
- PORTABLE GAME TERMINAL B** (1B) sends its **IDENTIFICATION NUMBER B** to the main body.
- The main body finds **GENE INFORMATION B**.
- The main body combines these to create **NEW GENE INFORMATION C**.
- This information is then stored in either **PORTABLE GAME TERMINAL A** (1A) or **PORTABLE GAME TERMINAL B** (1B) under the **IMAGINARY IDENTIFICATION NUMBER C**.
